

# Commercial Case Studies – Boilers, shipping and Commercial kitchens

## **BOILER SCALE REMOVAL- Bunbury Western Australia**

Phil Best: Western Australia  
0418 931 337

Phil Best in Bunbury who is the President of the Master Plumbers Association was very impressed with the CALCLEAR he put on. After a few weeks the boiler showed a great reduction in scale build up. Normally he had to remove 5 wheelbarrows of scale from this abattoir boiler. Post Script –Yearly Boiler inspection showed no scale – opened it up, had a look and closed it again !!!

## **Commercial Kitchens -Moffat, Melbourne**

The Moffat group designs, develops, manufactures and markets a comprehensive range of commercial food

service & bakery equipment and products. They supply Warewashing (Dishwashers and Glasswashers), Cooking, Bakery, Refrigeration equipment –

At Moffat we install a CALCLEAR Water Conditioner on our Convotherm Combi ovens to ensure ongoing maintenance is reduced. Once they are installed I know I don't have to worry about the ovens- especially in Rural areas. Woolworths stores decided to use the CALCLEAR after they compared ovens with / without CALCLEAR. It was an easy decision.

Arthur Witteveen. Moffat ,  
National Accounts Manager.

## **DESCALING Rinnai Hot water- Two Rinnai water heaters had**

come for servicing from very hard water areas of South Australia . The heat exchangers were heavily scaled with Calcium buildup and needed replacing.

We fitted the CALCLEAR Pre wound pipe, filled the scaled up heater with CALCLEAR treated water and left it to sit over the weekend. On Monday we fired up the heaters, fitted a stocking over the outlet and turned on the tap. CALCLEAR treated water passed through the scaled up heater, the scale was dislodged and shot out into the stocking filter thus removing the buildup on the heat exchangers. The outcome was that the heat exchangers were cleaned up and didn't need replacing.
