

CalcClear is the most effective, economical and environmentally friendly water conditioning system available.

CALC CLEAR

COMPUTERISED WATER CONDITIONERS

Every Business, from the largest Multi-national to the smallest cappuccino bar, uses water. The quality of the water supply varies greatly but where the mineral content is high, the problems of scaling and corrosion that hard water brings to industry become severe, costly and all too apparent.

Boilers, heating elements, valves, pipework, pumps and machinery and control systems scale up or become corroded. Algae and mould form in holding tanks, cooling towers ' and air conditioning plants. Soaps and detergents lather poorly. Filters, Steam Ovens, Dishwashers, Water Heaters, Cappuccino Machines and pit, Bulk Brewing equipment all suffer from scaling problems.

SOLVING THE PROBLEM

For some time now research has been carried out to try and find a more economical way of ionising water supplies that did not have flow limitations, or involve maintenance or require chemical treatments and ultimately acid de-scaling. Out of this research a new method of water treatment has emerged:

THE CALC CLEAR WATER CONDITIONING SYSTEM

CALC CLEAR uses computer generated sine waves, transmitted through a unique water supply pipe to deliver commercial quantities of ionised water. This process is so effective that the treated flow goes on to progressively and permanently de-scale all pipework, boilers, plant equipment and appliances connected to it.

HOW CAN IT HELP ME?

CALC CLEAR solves your problems!...

- Ionises entire water flow to which it is fitted.
- Effective on all water supplies (including high salinity bores)
- De-scales boilers, pipework, pumps, valves, washing systems, and all appliances connected to the treated flow, whilst still in service.
- Saves on energy bills
- Saves on repair and service bills

THE BENEFITS THAT THE 'CALC CLEAR SYSTEM' BRINGS

- Prolongs equipment life
- More than doubles the life of cartridge filters
- Ends the need for acid de-scaling
- Minimises chemical water treatments
- Minimises equipment downtime
- Minimises water pre treatment
- Minimises effluent treatment.
- CALC CLEAR runs on minimum electricity per annum
- CALC CLEAR is maintenance free
- CALC CLEAR uses NO CHEMICALS
- CALC CLEAR is kind to the environment.

WHERE CAN I USE IT?

- CALC CLEAR Water Conditioners can be used in Restaurants, Cafes, Bars, Pubs, Clubs, Casinos, Fast Food Outlets etc. to de-scale whilst still in service:
- Water Heaters
- Dishwashers (Cutlery, crockery and glassware dry residue free and sparkle again)
- Steam Ovens
- Cappuccino Machines
- Ice Making Machines
- Washing Facilities

CALC CLEAR can also be used in Hospitals, Laundries and Dry Cleaners to:

- De-scale boilers, heating elements and appliances whilst still in service — even remove existing scale
- Reduce detergents and chemical needs
- Eliminate boiler chemicals
- Reduce cooling tower scaling
- Economically soften your water supply
- Reduce energy consumption
- Reduce boiler heating time
- Reduce maintenance and repair bills
- Increase service life of appliance and fittings
- CALC CLEAR can be used Swimming Pools, Water Parks Et Aquariums.
- Entire pool content ionised
- Low conductivity maintained
- Reduction in pool chemical needs
- Reduction in algae and fungal formation

WHY USE CALC CLEAR?

CALC CLEAR Computerised Water Conditioners can be used to ionise the entire water supply of operations at a very modest cost. They will deliver the full range of benefits to all the areas listed above bringing substantial savings in capital, equipment, maintenance and repair costs to every aspect of your business.

Fitted in minutes ...

The units are compact and easy to install, requiring only a 240v AC power outlet and 1 metre of exposed pipework on which to wind the signal antennae.
